Art Unit: 3724

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claim 3, drawn to a tape dispenser having an integral spool.
  - II. Claims 6 and 7, drawn to a tape dispenser having a plurality of guides.
  - III. Claim 8,9,18,20 and 21, drawn to a tape dispenser having hinged walls.
  - IV. Claims 10,11 and 22, drawn to a tape dispenser having a wall closing tabs.
  - V. Claims 12-14,23 and 24, drawn to a tape dispenser having a belt loop.
  - VI. Claims 15,16 and 25, drawn to a tape dispenser having tape holding tabs.
  - VII. Claim 17,26 and 27, drawn to a tape dispenser having a corner cutting edge.
  - IX. Claims 28 and 29, drawn to a tape dispenser having visual inspection slots.
  
2. Claims 1,2,4,5 and 19 will be examined with the elected invention. Claim 1 links the inventions of groups I-IX. The restriction requirement of the linked inventions is subject to the nonallowance of the linking claim, claim 1. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be

subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

3. Inventions of groups I-IX are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, the tape dispenser having an integral spool of group I could be used without the guides of group II, and conversely, the tape dispenser having a plurality of guides of group II could be used with a loose spool, as opposed to the integral spool of group I. See MPEP § 806.05(d).

4. There is an excessive burden on the office to examine all of these inventions together, as shown by their search. See MPEP 808.02(C). For example, the search for group I would require looking in the winding and reeling arts, class 242. The search for group II would not be searched as above, but would need to be searched in class 226 for guiding webs. The search for group III would not need to be searched as above, but would need to be searched in class 206 for openable receptacle. The remaining groups also have their own unique class searches and different text searches.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different search and because of

their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. This application contains claims directed to the following patentably distinct species of the claimed invention:

Species A – figures 1-4

Species B – figures 5-8

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, most of the claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record

Art Unit: 3724

showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ken Peterson whose telephone number is 703-308-2186. The examiner can normally be reached on Monday thru Thursday between 7am and 4pm.

In lieu of mailing, it is encouraged that all formal responses be faxed to 703-872-9306. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Allan Shoap can be reached on 703-308-1082. Any inquiry of a general nature or relating to the status of this application should be directed to the receptionist whose telephone number is 703-308-1148.
